

# PIDS FELLOWSHIP AWARDS

## Recipient Survey Results

A recent survey assessed the career paths and success of prior awardees of the PIDS Fellowship and PIDS-St. Jude Fellowship Awards.

The survey was sent to 63 awardees (33 women [52%] and 30 men [48%]). There were 37 responses (60% response rate) from 19 [51%] women and 18 [49%] men.

The PIDS Awards were strong predictors of future funding, as evidenced by an **88%** success rate for subsequent National Institutes of Health K applications and **70%** for post-K NIH grants (R, P, U) – both much higher than national averages. Many PIDS awardees remaining in academics also garnered subsequent funding from non-federal sources.

The PIDS Awards have also specifically supported women in developing biomedical science careers. There were no sex differences in K application rate or success rate, R application rate or success rate, or publication record.

### SUBSEQUENT GRANT SUCCESS

of awardees applied for K-level support from the NIH

#### Success rates were:

for K08s

for K23s

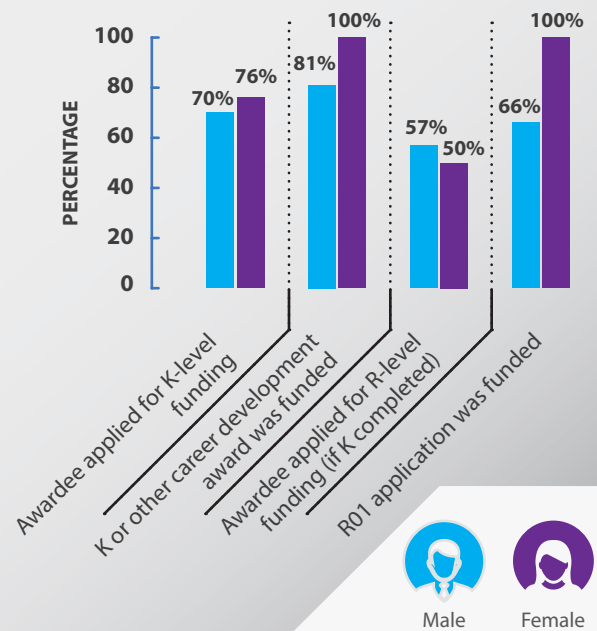

for K12 appointments

Other career development awards

### GENDER

How did the PIDS Fellowship Award impact your fellowship and early faculty career?

**“Was a springboard for further funding post-fellowship”**

“I was much better positioned to obtain a K award”

**“Very impactful, allowed me to pursue independent studies much earlier in my career”**

“I am convinced that this recognition helped me in the process of securing a faculty position”

“Huge impact – allowed me to also do post fellowship training, which was indispensable”

**“Tremendous impact”**

“It helped immensely when applying for subsequent grants and when searching for a faculty position”

“Demonstrated that I was capable of getting my work funded”

“The award facilitates so much more than research productivity!”

**“—Critical”**

### PUBLICATIONS

At the time of their first faculty appointment:

of respondents had at least 6 publications total

Average number of total publications since completion of fellowship:

**27**

An average of 7 first-author and 11 senior-author publications

### FACULTY TRANSITION

Awardees that received a startup package by gender

Startup packages > \$400,000 by gender

Among the 42% of respondents who received a package:

<\$400k

between \$400-700k

>\$700k
